

Relax AND STAY healthy

Discussion point

Discuss with a partner.

- 1 Which claims in the infographic do you think are true?
- 2 How do you think these ideas work?
- 3 What things do you do to stay healthy?

Laugh

Sleep

Read

VIDEO

SMART EYE EXAMS

Before you watch

Answer the questions below with a partner.

- 1 How many functions of a smartphone can you think of?
- 2 Which apps do you use? Which are most useful?

Colorful pills and tablets.

While you watch

Read the questions and then watch the video.
Circle the correct answers.

- 1 What does the app do?
 - a Records a person's location and details
 - b Tells the doctor what is wrong with the eye
- 2 Why don't people travel to a doctor?
 - a cost
 - b fear
 - c no transport
- 3 What percentage of people who are blind live in low-income countries?
 - a 80%
 - b 90%
 - c 70%

After you watch

Answer the questions with a partner.

- 1 Do you ever use your phone to find out medical information?
No, because ...
Yes, because ...
- 2 What reasons do some people avoid going to the doctor for?
Some people avoid the doctor because ...
- 3 Do you think mobile technology will become more important in medicine?
Yes, because ... *No, because ...*

Self-diagnosis

A Vocabulary preview

1 Complete the sentences with the words in the box.

allergy condition frightening illness
pharmacist reliable severe wearable technology

- 1 I need to see the _____ this afternoon to ask about my symptoms and buy some medicine.
- 2 It can be _____ to read about symptoms online because it can suggest very serious illnesses.
- 3 You can't always trust the medical advice you get online. It's not always _____.
- 4 I have an _____ to fish, but my reaction is not very bad.
- 5 He has had a heart _____ for three years now. It affects him when he plays sports.
- 6 _____ now let's people check information about their health throughout the day.
- 7 I couldn't go to work on Monday. It wasn't serious, just a minor _____. By Tuesday it was gone.
- 8 My headache is so _____ I think I might have to go home.

2 Discuss these questions with a partner.

- 1 How often do you use a pharmacist for medical advice?
- 2 What medical information do you look up online?
- 3 Do you think that wearable technology is a reliable source of health information?
- 4 What is your advice for people who find doctors frightening?

B Before you read

Look at the title and the glossary box. How often do you self-diagnose? What can be some of the problems of self-diagnosis?

Previewing a text

Self-diagnosis

- 1 We rely on online sources for our medical problems more and more. Many people now choose to diagnose themselves online when they are sick. We are now more likely to google our symptoms before speaking to a partner, friend, family member, doctor, or pharmacist. The most common illnesses or conditions people search for are physical pains such as back pain, mental problems such as depression, food reactions such as allergies, and serious conditions such as diabetes. While many of us rely on this information, how accurate and reliable is it?
- 2 Many people think that the Internet has made it easier for us to diagnose our own illnesses, but research suggests that using the Internet can be a very bad way of getting the right medical treatment. The main problem comes from one of two things. Firstly, we can be too positive about how severe our symptoms are. The other problem is the opposite: some people are too negative about their situation. For example, the same symptom might be understood by one person as indigestion, but another could understand it as a heart attack.
- 3 These reactions and the availability of technology have led some to argue that we are creating a generation of "worried well". Sometimes people use software that is not tested or scientific to research their symptoms. In people who are already anxious, this poor information can lead to worry. Generally, the more frightening an article is, the more of your attention it is likely to get. Forums can also make people worry a lot. Anxious people are likely to then go to a doctor to find medical help even if they don't always need it. The main problem actually comes from people who do not worry as much though. If they do not diagnose themselves accurately, they may not go to a doctor even though they have a serious medical condition.
- 4 A new kind of online software is called a symptom checker. These programs try to analyze our symptoms and offer advice as to whether we should seek further medical help, such as go to see a doctor or pharmacist. Researchers at the Harvard Medical School found that, although these programs are often wrong, they are more accurate than a general Internet search. However, getting the right diagnosis might not be as important as getting the right advice about whether, or how quickly, to visit a doctor. Under tests, for symptoms that were severe and would need emergency care, the researchers found that the software was right 80% of the time, but Internet searches for the same information were only right 64% of the time.
- 5 At the moment, self-diagnosis is quite basic, but some argue that we will have much more sophisticated self-care in place in the next 20 years. For example, body scanners in shops might be able to diagnose illnesses faster and more effectively than doctors. The system could also give drugs, like a pharmacist does, and make appointments with a doctor. This, along with using wearable technology such as watches, means we could have dozens of daily statistics about our health. In just a few years, googling your symptoms could seem quite an old-fashioned method as technology starts to constantly check our health.

GLOSSARY

diagnose (v) to find out what physical or mental problem someone has by examining them

diagnosis (n) a statement about what disease someone has, based on examining them

indigestion (n) feeling unwell from eating food, often too quickly

Taking notes: using your own words

C Global reading

We often take notes when we read to help research a topic or prepare for an essay. Taking notes in your own words is important. It will help you avoid potential plagiarism (copying other people's work). Writing notes in your own words also helps you understand what you are reading and writing about, rather than just copying what you read.

Higher numbers of people use the Internet when they are ill. It is also the most popular source. People look for a wide range of health issues including major illnesses.

- 1 Match words and phrases in the notes with the things they paraphrase in the text.

- 1 ill _____
- 2 source _____
- 3 health issues _____
- 4 major illnesses _____

- 2 Make notes in your own words on these topics.

- 1 Two main problems with diagnosing ourselves
- 2 The effects of worrying
- 3 Symptom checkers
- 4 Self-diagnosis and technology in the future

D Close reading

Read the text. Write *T* (True), *F* (False), or *NG* (Not Given) for each sentence.

- 1 People often check physical symptoms, like back pain, online. ____
- 2 The Internet makes everyone worry about their health more. ____
- 3 The accuracy of medical information on the Internet has improved. ____
- 4 We pay more attention to articles that make us worry. ____
- 5 Symptom checkers are better than the Internet in general. ____
- 6 Doctors will work largely online with patients in the future. ____

E Critical thinking

- 1 When do you think self-diagnosis is positive? Can you give an example?
- 2 What are some of the dangers of self-diagnosis? What makes you say that?

Scanning

Use evidence to support your reasoning

A large part of any assignment will consist of deciding on and presenting the best evidence to support your argument.

Take multiple perspectives

The best answers identify how and why various experts agree or disagree on an issue, and demonstrate how the evidence supports, or does not support, their positions.

Analyze your own work critically

Your tutors or examiners will take a critical approach when marking your work. Before handing in an assignment, analyze it critically, as you would other material you read.

© Stella Cottrell (2013)

- 1 Discuss with a partner. When you find a source, how do you decide whether it is a good source to use in your essay? Think about:

accuracy date relevance to the topic the author the reason it was written

- 2 Read *Critical thinking when writing* and then discuss these questions with a partner.

- 1 How can you decide whether an expert wrote the text?
- 2 Some writers want to present particular arguments. How can you make sure your essay will be balanced?
- 3 How do you decide whether a website is reliable or not?

- 3 Look at these comments from teachers. What does each person need to do to improve their writing?

- 1 More critical analysis needed.

This person needs to not just repeat information from sources. They need to give their opinion. They need to look at the strengths and weaknesses.

- 2 You have only described the theory. You need to evaluate it.
- 3 Your essay is based only on personal opinion.

- 4 Think about the last feedback you received. Write a checklist for the areas you need to improve.

A good night's sleep

A Vocabulary preview

1 Match the words in bold with the correct definitions.

- | | |
|------------------------------|--|
| 1 exercise (n) | a the process of becoming heavier |
| 2 mental health (n) | b the standard to which someone does something such as a job or an examination |
| 3 performance (n) | c working hard and producing or achieving a lot |
| 4 physically (adv) | d in an important way |
| 5 productive (adj) | e the condition of your mind |
| 6 regularly (adv) | f in a way that is related to your body or appearance |
| 7 significantly (adv) | g often |
| 8 weight gain (n) | h physical activity done in order to stay healthy and make your body stronger |

2 Complete the sentences with words from Exercise 1.

- 1 I am more _____ and achieve a lot more when I sleep well.
- 2 I _____ get less than six hours' sleep a night.
- 3 My _____ improves with good sleep. I feel calmer, more relaxed, and less stressed.
- 4 When I work hard _____, for example in the garden, I sleep a lot better.
- 5 I eat a lot of sugary foods to stay awake. Unfortunately, this leads to _____.
- 6 When I do _____ I get better sleep. Especially when it is outside.
- 7 My _____ at work is much worse when I don't get a good night's sleep. The standard improves with sleep.
- 8 When I don't sleep well for a week it _____ impacts on my health.

3 Check (✓) the sentences that you agree with in Exercise 2. Compare your choices with a partner.

B Before you read

Think of three ways a lack of sleep can affect your health. Compare your ideas with a partner.

Preparing to read

A good night's **sleep**

GLOSSARY

immune system (n) the body's way of dealing with illnesses and keeping us healthy

obese (adj) too fat, in a way that is dangerous for your health

type 2 diabetes (n) when your body does not produce enough of the hormone insulin. This type of diabetes is usually caused by lifestyle

- 1 Many people enjoy a good night's sleep, but we often feel guilty for spending too much time in bed. However, a good night's sleep is just as important for our health as a good diet and exercising. Unfortunately, modern complex lives are making it harder and harder to sleep at normal times and to sleep well. So what effect does a poor night's sleep have on our bodies?
- 2 One of the biggest negative health effects is that people who do not sleep well are likely to gain weight. It is in fact one of the biggest causes of obesity. People who sleep for a short amount of time have between a 55% and 89% chance of becoming obese. This occurs largely because people who sleep less tend to eat more because they feel tired and need more energy. They also eat more of the wrong things. When we do not get enough sleep, our bodies produce higher levels of the hormone ghrelin which makes us eat more. To gain more energy quickly we also tend to seek out comfort foods that are high in fat and sugar. At the same time, we do not have enough of the hormone leptin. This hormone does the opposite—it tells us when to stop eating. These hormone changes dramatically affect the way we consume food.
- 3 In addition to weight gain, poor sleepers are also at a much higher risk of various other serious illnesses and diseases. Firstly, people who sleep less than seven to eight hours per night have an increased risk of a heart attack or stroke. It also significantly increases the risk of type 2 diabetes. In one study, reducing sleep to four hours per night for just six nights led to the people developing pre-diabetes symptoms. Sleep is also important for boosting our immune system and helps in the process of recovery from minor illnesses. People who sleep less than seven hours a night are much more likely to develop a cold than those who sleep eight or more hours a night.
- 4 As well as affecting people physically, extreme tiredness, or fatigue, can have severe negative mental effects. Bad sleep, tiredness, and fatigue also cause, and can be a symptom of, depression. Our mental health also depends on our social groups and interacting with other people. Unfortunately, if we do not get enough sleep, we are not able to interact as well with others. We cannot read other people's emotions well when we are tired so we cannot recognize when people are angry or happy. In other words, we cannot judge how people feel and how we should react.

- 5 All of these effects show how sleep, or lack of sleep, can change individual people's lives. However, they also can have an impact on society as a whole. When it comes to work and education, our ability to concentrate, focus on work, and be precise can depend on how well we've slept. How much we achieve is also reduced when we do not get enough sleep. We are much more likely to make a mistake at work or during school when we have poor-quality sleep. While this might not matter in some roles, for those who can put others in danger of injury or even death, such as doctors, drivers of vehicles, and operators of machines, it can make a big difference. Good sleep, on the other hand, can increase our ability to solve problems and improve our memory performance.
- 6 So, what can be done to help improve the quality of sleep across society? One important issue is to consider the circadian rhythm of the body. The circadian rhythm is our natural sleep pattern, in other words, the natural time our bodies want to go to sleep. This varies from person to person to some extent but the biggest differences are between different generations. Firstly, young babies need *significantly* more sleep than adults, and teenagers need *slightly* more sleep than adults. However, even more importantly, because of the hormones released in our body, these different age groups need to sleep at different times. For

example, a ten-year-old child cannot focus on academic work before 8:30 in the morning whereas a teenager or college student cannot really work well before 10 a.m. Studies in the U.K. have shown that when schools change the hours pupils start school, there is a significant improvement in academic performance. Even with adults, the normal nine-to-five routine of work does not match our body clock (circadian rhythm) until we reach the age of 55.

- 7 Arguably, the health of societies across the world is suffering because we do not get enough sleep and we are not allowed to sleep and work at the right times. Working shifts can significantly increase your risk of heart disease, cancer, and diabetes. It can make your life shorter. While not quite so severe, even just working or studying during the "wrong" hours can affect people's health and performance. Simply changing the start and finish time of school and work could improve the health of whole generations. Academic performance would improve and employees would be happier and more productive. One factor that wins many arguments is money—what is something worth? Arguably, the countries and companies that are willing to change their working day to improve the health of employees could ultimately become the richest and most successful as they have the most productive staff.

C Global reading

Read *A good night's sleep* and complete the summary.

People who do not sleep well tend to eat more of the wrong foods. This is because the body produces more ¹_____ which leads to people consuming more. We also produce less ²_____ which tells us when we have eaten enough. People who do not sleep enough also have more chance of getting an ³_____. When we don't get enough sleep, we can become depressed and we can't ⁴_____ as well with others. Our ability to perform tasks is also reduced. In some jobs this may cause an ⁵_____ or even result in people dying. The ⁶_____ is the body's natural clock and this changes over different ages. Starting work at nine and finishing at five only works for people aged ⁷_____.

D Close reading

When you write an academic essay, you will need to do research and read articles to find information that supports your ideas. Make notes before you read on questions or ideas you have. Then as you read, record any information you find that does or doesn't support these ideas.

Read the text and underline support for these ideas.

- 1 People who lack sleep may gain weight.
- 2 Our bodies want to eat the wrong foods when we are tired.
- 3 Poor sleep could lead to serious medical conditions.
- 4 Poor sleep can affect our mental health.
- 5 People of different ages need different amounts of sleep.
- 6 People should not start school or college early.

E Critical thinking

- 1 What do you think would be the main benefit of better sleep for you?

I think the main benefit would be ...

- 2 Do you think it would be a good idea to change the hours of school and work? Why?

I do / don't think it would be a good idea because ...

Researching information to support your writing

Vocabulary development

Words to describe medical symptoms

1 Match the words in bold with the correct definitions.

- | | |
|--------------------------|--|
| 1 ache (n) | a painful and uncomfortable, usually as a result of an injury, infection, or too much exercise |
| 2 cough (v) | b to force air up through your throat with a sudden noise, especially when you have a cold |
| 3 dizzy (adj) | c happening or done now, without any delay |
| 4 fever (n) | d needing immediate attention |
| 5 immediate (adj) | e not having much strength or energy |
| 6 sore (adj) | f a continuous pain but not a strong pain |
| 7 urgent (adj) | g feeling as if you or the things around you are spinning, especially when you think you are going to fall |
| 8 weak (adj) | h a medical condition in which the temperature of your body is very high and you feel ill |

2 Complete the sentences with words from Exercise 1.

- My legs are _____ after going for a run yesterday.
- I have a _____. My temperature is really high.
- My throat is really sore from my bad _____.
- I think I stood up too quickly. I feel _____.
- I feel really _____. I don't have the energy to get out of bed.
- The pain isn't strong but it's a constant _____.
- I think you need _____ medical help. That does not look good.
- You should only go to a hospital for _____ problems.

3 Discuss these questions with a partner.

- How important is healthy living to you?
- How do you feel when you don't sleep or eat well?
- Are the physical or mental effects of poor sleep worse?

Academic words

VOCABULARY

1 Match the words in bold with the correct definitions.

- | | |
|--------------------------|---|
| 1 concentrate (v) | a physical damage done to a person or a part of their body |
| 2 consume (v) | b to communicate with and react to another person |
| 3 injury (n) | c not very important in comparison with people or things of the same type |
| 4 interact (v) | d to eat or drink something |
| 5 minor (adj) | e exact and accurate |
| 6 precise (adj) | f a series of things that happen and have a particular result |
| 7 process (n) | g becoming fit and healthy again |
| 8 recovery (n) | h to give all your attention to the thing you are doing |

2 Complete the sentences with words from Exercise 1.

- 1 I'm trying to _____ less sugar.
- 2 He has broken his leg. It's a serious _____.
- 3 I can _____ on my work better when I drink a lot of water.
- 4 It's only a _____ injury. I don't think I need to go to the doctor.
- 5 It's important to use a _____ amount of medicine. Too much is dangerous.
- 6 I feel depressed when I don't _____ with other people for a few days.
- 7 There are four stages in the _____.
- 8 It takes about three weeks to get better and make a full _____.

3 Discuss these questions with a partner.

- 1 What injuries have you had in your life? Which had the hardest recovery?
- 2 Do you agree that both physical and mental strength are important if you want to succeed?
- 3 What helps you to concentrate better?

Writing model

You are going to learn about reported speech and about proofreading your writing. You are then going to write and edit an essay to answer a question about diagnosing and treating yourself at home.

A Analyze

Which ideas from the box below are mentioned in the model answer? Read the text. Underline the relevant fragments.

Agree	Disagree
Quick diagnosis	Mistakes can be made
Saves money	Problem in serious illnesses
Takes pressure off doctors	Doctors do not write the information
More effective	

B Model

There is a large amount of information available online to help people check their symptoms and diagnose themselves when they are ill. While this information is useful, this essay will argue that people should not rely on the information because it is not precise enough.

Studies have found that more and more people believe the Internet is a useful source of medical information. They can enter symptoms, such as weak or dizzy, into software or a search engine and use the results to try to diagnose their illness or injury quickly. This process can stop people going to the doctors when it is not necessary and take pressure off doctors and hospitals.

However, a lot of the information is inaccurate and people can often make mistakes when trying to diagnose or treat themselves. A recent study found that one person may enter the same symptoms as another and reach a completely different conclusion. While this does not matter for minor illnesses it presents big risks in the case of an emergency.

In conclusion, while the Internet may be a useful and a growing source of medical information, people do not have the knowledge and skills to diagnose themselves. As a result, people should not rely on the Internet to decide what illness they have or they could delay their recovery.

1 Read the model answer and answer the questions.

- Which sentence in the introduction gives the main opinion?
- In the main body, does the writer present their view or the other arguments first?
- Which sentence in the conclusion paraphrases the main argument?

2 Work with a partner. When would you look up symptoms online?

Reported speech

We use reported speech when we want to report what someone else has said. In academic writing this is often used when directly or indirectly quoting research or another text.

When reporting we often change the tense, e.g.

Simple present > simple past

Direct speech: *"Our research shows that more people use the Internet for self-diagnosis," reported the doctor.*

Reported speech: *The doctor reported that the research showed more people used the Internet for self-diagnosis.*

Other tense changes include:

Present perfect > past perfect simple past > past perfect will > would

We also change the pronoun when we use reported speech:

Mike said, "I feel ill."

Mike said that he felt ill.

It is also important to use a range of specific verbs in academic written work, e.g.

She had claimed ... Scientists would argue ...

1 Rewrite the sentences in reported speech.

- 1 The researchers said, "The Internet is not very accurate for medical diagnosis."

- 2 The doctor said, "I have had a big increase in patients self-diagnosing."

- 3 A leading psychologist said, "The participants showed increased levels of depression when they had under six hours' sleep for more than a week."

- 4 One scientist said, "Society will develop further health problems because of poor sleep."

- 5 The lecturer suggested, "You need to do the test on more people."

2 Match the reporting verb with its meaning.

- | | |
|-------------------|--|
| 1 argue | a to give details about what someone or something is like |
| 2 claim | b to say that something is true, even if there is no definite proof |
| 3 describe | c to give reasons why you believe that something is right or true |
| 4 prove | d to say something clearly |
| 5 report | e to provide evidence that shows that something is true |
| 6 state | f to provide information about something that exists or has happened |

3 Write these sentences in reported speech using the verbs in parentheses.

- 1 Peterson: "Starting work at nine is not effective." (claim)
Peterson claimed that starting work at nine was not effective.
- 2 Leading doctors: "People need eight hours' sleep to have a healthy body."
(state)

- 3 Analysts: "Internet diagnosis will be more accurate in the future." (report)

- 4 Smith: "Self-diagnosis can increase levels of stress and anxiety." (describe)

- 5 University researchers: "The technology has not been 100% accurate."
(argue)

- 6 Academics: "Concentration levels fall dramatically with only six hours' sleep." (prove)

Writing skill

WRITING

Proofreading and editing your work

Before handing in your work it is important to check your work for grammar errors, spelling, punctuation, structure, and academic style. Each one should be checked in a separate stage and not at the same time.

1 Correct the mistakes in these sentences.

- 1 More and more patients is diagnosing themselves online.
- 2 If people will diagnose themselves online, they won't do so accurately.
- 3 The Internet has become a valuable source of information.
- 4 People with the same symptoms do not always think the same illness.
- 5 Recent studies had shown that self-diagnosis on the Internet is not very accurate.

2 Which word is spelled correctly in each group?

- | | | |
|--------------|---------------|-------------|
| 1 compltly | environmental | localy |
| 2 achieve | respons | contrebuton |
| 3 demonstrat | comunity | maintenance |
| 4 minimzed | philosofy | consequence |

3 Correct the incorrect spellings in Exercise 2.

4 Look at the introduction to the essay question. What is missing from the introduction?

"We should diagnose and treat ourselves at home before going to the doctor. To what extent do you agree or disagree?"

More and more people are using the Internet and other programs to diagnose themselves at home. Self-diagnosis can save time, but many of the programs are not very accurate.

Writing task

Write an opinion essay to answer the question:

*"We should diagnose and treat ourselves at home before going to the doctor.
To what extent do you agree or disagree?"*

Brainstorm

Look back at your notes on *Self diagnosis*. Use the notes to help you brainstorm the advantages and disadvantages of treating and diagnosing ourselves.

Reasons to agree	Reasons to disagree

Plan

- 1 Choose two reasons to agree and two reasons to disagree to focus on.
- 2 Decide whether you think the reasons to agree or disagree are stronger.
- 3 Summarize your main opinion in one sentence.

Write

Using your brainstorm and plan write your essay. Pay attention to your reported speech. Proofread your work for errors with grammar, spelling, and punctuation. Your essay should be 200 to 250 words long.

Share

Exchange essay with a partner. Look at the checklist on page 189 and provide feedback to your partner.

Rewrite and edit

Read your partner's comments. What could you change to make your writing better? Revise your text, then check it for errors. Think about:

- your use of reported speech
- errors you usually make (check these carefully).

Write the final draft.
